

Beginning BlackBerry Development (Books for Professionals by Professionals)

Are you a Java programmer looking for a new challenge and money-making opportunity? If so, Beginning BlackBerry Development may just be the book for you. This book will teach you everything you need to know to start developing apps that run on the BlackBerry family of devices and smartphones. With over 50 million BlackBerry devices sold and the launch of the new BlackBerry App World, there has never been a more exciting time to get into BlackBerry application development. Assuming only some programming background in Java or a similar language, this book starts with the basics, offering step-by-step tutorials that take you through downloading and installing the BlackBerry development environment, creating your first apps, and exploring the BlackBerry APIs. You'll learn how to use the BlackBerry user interface components to create the look and feel you want; how to use networking to create applications that can talk to servers anywhere on the internet; how to manage application lifecycle and data storage; and how to use the GPS and mapping functionality included on many devices to create location-aware applications. You'll also learn about the different ways you can package and distribute your apps, from deploying apps on your own website to listing your apps for sale on BlackBerry App World. What you'll learn

- Complete BlackBerry native application development
- How to work with the BlackBerry Java Development Environment (JDE) and the JDE Plug-in for Eclipse
- How to debug your apps, and deploy onto real devices
- How to work with networking, GPS and maps, and persistent storage
- How to work with and customize the BlackBerry UI
- Ways to distribute your apps, from hosting on your own website to listing on BlackBerry App World

Who this book is for

- Software developers who have little or no experience with BlackBerry

development and are interested in developing native applications or apps for BlackBerry. Ideally, you'll have some background in Java or a similar language.
