

Java 7 JAX-WS Web Services

A practical, focused mini book for creating Web Services in Java 7. Develop Java 7 JAX-WS web services using the NetBeans IDE and Oracle GlassFish server. End-to-end application which makes use of the new clientjar option in JAX-WS wsimport tool. Packed with ample screenshots and practical instructions. In Detail Web services are applications that use open, XML-based standards and transport protocols to exchange data with clients. In the book Developing a JAX-WS Web Service using the wsimport clientjar Option, we shall create a JAX-WS web service with Java 7. We shall discuss the new clientjar option in the wsimport tool or the wsimport ant task which is used to generate JAX-WS portable artifacts from a service wsdl. Subsequently, we use the web service artifacts to invoke the web service from a web service client. What you will learn from this book. Set up and install the NetBeans IDE and Oracle GlassFish Server. Understand how the new clientjar option in wsimport is used to develop Web Services in Java 7. Approach This book takes a practical approach for building JAX WS web services with Java 7. Plenty of sample code and screenshots are used to help you apply these concepts in a real-world scenario. Who this book is written for This book is targeted at developers who want to create web services with Java 7. If you use NetBeans-Glassfish for Java EE development you would be interested in how the new wsimport clientjar option may be leveraged to simplify web service development.
