

Data Science, Classification, and Related Methods: Proceedings of the Fifth Conference of the International Federation of Classification Societies ... Data Analysis, and Knowledge Organization)

This volume contains selected papers covering a wide range of topics, including theoretical and methodological advances relating to data gathering, classification and clustering, exploratory and multivariate data analysis, and knowledge seeking and discovery. The result is a broad view of the state of the art, making this an essential work not only for data analysts, mathematicians, and statisticians, but also for researchers involved in data processing at all stages from data gathering to decision making.
