

## Fun with Algorithms: 5th International Conference, FUN 2010, Ischia, Italy, June 2-4, 2010, Proceedings (Lecture Notes in Computer Science / Theoretical Computer Science and General Issues)

FUN with Algorithms is a three-yearly conference that aims at attracting works which, besides a deep and interesting algorithmic content, also present amusing and fun aspects, are written with a keen wit, and are presented in a lively way. FUN is actually one of the main moving wheels behind most of the best scientific results, and in a sense this conference answers to the unconfessed need of having a place where we can present the most lighthearted part of our work without sacrificing precision and rigor. The 5th International Conference on Fun with Algorithms (FUN 2010) was held at Hotel Continental Terme in Ischia (Italy), June 2-4, 2010. The island of Ischia, a worldwide famous spa, sea, and tourist resort, is the ideal venue to host an event dedicated to pleasure as well as to science. The call for papers attracted 54 submissions from all over the world. Submitted papers were characterized by an extremely high quality and featuring a large variety of topics. After a careful and thorough reviewing process, the Program Committee selected 32 papers. The program also included three invited talks by Roberto Grossi, Prabhakar Raghavan, and Paul Spirakis. Extended versions of selected papers presented at the meeting will be published in a special issue of Theory of Computing Systems.
