

Human-Computer Interaction: Design, Developments and Applications

Human-computer interaction is an applied field of research and study that aims to analyze the user interface and evaluate the interaction between humans and computers. The topics included herein on semantic systems, privacy, security and trust management, social computing and social intelligence are of utmost significance and bound to provide incredible insights to readers. It strives to provide a fair idea about this discipline and to help the readers develop a better understanding of the latest advances within this field.
