

## C/NL2 for Windows: Linear and Nonlinear Microwave Circuit Analysis and (Microwave Software Library)

These disks represent an upgrade of the first version of the software and are now for Windows. C/NL2 is a powerful circuit analysis and optimization program for use on a PC. It now runs under Windows to give a modern graphical user interface, sophisticated graphs and input/output and mouse interface. The C/NL2 allows the user to analyze and optimize gain, return loss, noise performance and nonlinear distortion of a wide range of linear RF and microwave circuits. It is a full-up linear microwave/RF circuit simulator as well as a nonlinear one. C/NL2 for Windows improvements include: sparse-matrix analysis allowing a greater number of nodes in each subcircuit and faster analysis of large circuits; improved optimizers; improved models; more types of circuit elements; multiple ports; equation parser; and nodal noise analysis giving all four noise parameters.
