

Information Security Risk Analysis On-line Self-study Course

This course enables information security managers and professionals to understand when, why and how to conduct effective risk assessment and analysis. The course takes you through the risk analysis process of identifying asset ad threats, prioritizing threat vulnerabilities, identifying appropriate safeguards and monitoring their effectiveness within your organization. You will learn pros and cons of various quantitative and qualitative methods of analysis, including the facilitated risk analysis process (FRAAP). The course contains time-saving checklists, examples, case-studies, and definitions of terms and standard controls for regulations such as GLBA, HIPPA, SOX, ISO 17799, among others.
