

Recent Trends in Data Type Specification: 3rd Workshop on Theory and Applications of Abstract Data Types Selected Papers (Informatik-Fachberichte)

This volume contains the major part of the contributions to the 3rd Workshop on Theory and Applications of Abstract Data Types held in Bremen (Germany) from November 13 to November 16, 1984. The workshop, as both its predecessors (Sorpesee, 1982 and Passau, 1983), brought together many researchers interested in algebraic specifications and related topics. It provided an opportunity to present the latest, even unfinished, work and to discuss the future trends and research problems. The remarkable progress of the field reported at the workshop provoked this volume. The present collection of papers documents the recent developments and trends in data type and software specification in theory and in practice. The theoretical contributions pursue four objectives: the liberation of the specification methods from the underlying logic (Sannella and Tarlecki; Maibaum and Sadler), the extension of the algebraic theory of data types to meet adequately the semantics of imperative programming languages and the idea of observability (Wagner; Hennicker and Wirsing; Moller and Dosch; Streicher), the adaptation of stepwise-refinement techniques to specifications with loose semantics (Beierle and Voss) and error and exception handling (Gogolla; Poigne). The papers oriented more towards practice are harder to classify.
