

# SAS/ACCESS 9.2 for Relational Databases: Reference

Explains and shows how to use all major features of SAS/ACCESS interfaces to available relational databases: LIBNAME, data set, and system options; macro variables; threaded reads; PROC SQL interactions; and numerous examples with output. Contains information common to all DBMSs and a reference section for each DBMS: DB2, HP Neoview, Informix, Microsoft SQL Server, MySQL, Netezza, ODBC, OLE DB, Oracle, Sybase, and Teradata. In this release, you can process SAS requests directly within Teradata to significantly improve performance.
