

Virtual Therapy: prevention and treatment of psychiatric conditions by immersion in virtual reality environments

Virtual reality immersion therapy (VRIT) is the 21st Century Practice in the treatment of anxiety disorders according to the American Board of Professional Psychology. VRIT has been widely used by U.S. Government agencies for assessment and treatment of post-traumatic stress and traumatic brain injury. Agencies include the Department of Defense, Office of Navy Research, Defense Centers of Excellence, Naval Postgraduate School, TATRC, DARPA and numerous Army, Navy, and Air Force agencies and divisions, Department of Veterans Administration, Department of Health and Human Services and numerous VA hospitals, and TRICARE and non-government health organizations. VRIT training is offered through continuing education workshops for licensed therapists.
